T. F. McCraw
 Special Assistant to the
 Assistant Director for
 Health Protection
 Division of Operational Safety

PUBLICATION OF REPORT "EXPOSURE RATE REDUCTION ON BIKINI ISLAND
 DUE TO CONCRETE DWELLINGS"

Below are our comments on the subject report.

We feel that the report authored by you and Oliver D. T. Lynch, Jr.,
 is well written and informative. We endorse its publication as an
 AEC Technical Information Document.

It might be useful to include an approximate factor for converting
 the $\mu\text{R/hr}$ as measured by the Baird monitor to millirad/year.

Some estimate of the population dose reduction (man rad/year)
 achieved by this type of construction would add perspective, but
 we recognize that the occupancy factors required for such an
 estimate might not be available at this time.
